

ABSTRACT

A job executing system in which, with respect to a same processing object DC1, designated jobs are executed in sequence, includes: a job management unit for managing input-related job JB11 which executes chiefly input processing and output-related jobs which chiefly executes output processing; and a job synthesizing unit for generating a synthetic job B (DC1, JB11, JB12) constituted by an input-related job which has been already executed, and an output-related job which will be executed hereafter.
